# INSTALLATION GUIDE

## HANDLING AND UNPACKING

Before continuing any further with the installation of this fascia please read the following:

### Important instructions.

- The approximate lifting weights of the fire front components are as below:

Fire front	3.02 kg
Ash pan	1.73 kg
- One person should be sufficient to lift the fire front. If for any reason this weight is considered too heavy then obtain assistance.
- When lifting always keep your back straight. Bend your legs and not your back.
- Avoid twisting at the waist. It is better to reposition your feet.
- Avoid upper body / top heavy bending. Always bend from the knees rather than the waist. Do not lean forward or sideways whilst handling.
- Always grip with the palm of the hand. Do not use the tips of fingers for support.
- Always keep the surround as close to the body as possible. This will minimise the cantilever action.
- Use gloves to provide additional grip.
- Always use assistance if required.

## CONTENTS

# INSTALLATION GUIDE

## FITTING THE SUPPORT BRACKETS

- Carefully unpack the fire front and remove any protective film.
- Locate and secure the support brackets as in figure 2 using the four self tapping screws supplied.

Figure 2.

## FITTING THE FIRE FRONT BRACKETS

- The fire front is supplied with 2 machine screws. Locate these into the holes at the rear of the fire front (See figure 3).
- Locate the screws in the rear of the fire front into the slots in the support brackets. It may be necessary to adjust the screws to obtain the best fit.
- Place the ash pan in front of the fire front.
